This knowledge is traditional knowledge, collected by survey, verified in a community assembly, and validated according to the principles of organic farming ***(health, ecology, equity, precaution)*** by a committee of agroecology experts from outside the collection area.

This knowledge, carried by ***Muhammed Kolly*** de Bondali, comes from the indigenous community of Foni Bondali in The Gambia

Implementation context

Seeds are prone to pest attacks, which can lead to huge crop losses. Precise control strategies are needed to control pests, as different classes of insects are specific to a particular type of seed.

The seeds are destroyed in the soil for germination. Knowledge can be used to reduce this destruction.

Expected benefits of the practice

Environment

- Eco-friendly practice
- Environmentally friendly

Economic

- Highly profitable and improves producers' income
- A practice that is inexpensive for the producer: economic gain

Description of the practice

- Dry leaves of Mama kunkoi
- Plus dried Neem seed leaves
- Mix and mash using mutar.
- Can be used as a seed dressing during sowing
- Collect mamakungkoyo leaves, neem leaves, and neem seeds
- Dry them in the shade until you are sure they are dry
- Mix and pound it using mutar
- Powder can be used for dressing seeds during sowing

The quantity depends on the size of the field
